Whirlpool oven owner' s manual self clean

First, remove everything (including shelves) from your oven. In the range, make sure there is nothing on the stove or in the storage drawer. Clean the interior and frame with a wet cloth, avoid gaskets so they will be sealed properly. Then, select the cleaning settings, follow the recommendations from your self-cleaning oven instructions. Whirlpool® cleaning itself has settings for light, medium, or heavy soil. Cleaning tip: To clean yourself less frequently, clean the cake spill right after it happens. Dilute a little light hand washing detergent, baking soda or lemon juice in water. Use a clean cloth to scrub your oven with one of these cleaning solutions. Next, your oven locks and heats to a very high temperature. While the cleaning oven itself has extra insulation to help handle the heat, it is important to keep the children away. No one should touch the oven when cleaned. Failure to follow these instructions may result in burns. Electrical Shock Hazard • Disconnect power before service. • Replace all parts and pannel before operation. • Failure to do so may result in death or electric shock. High heat reduces snagged food and oil to ash in a process called pyrolytic cleansing. Your oven will remain locked and the fan will run until it cools down. Cycles in whirlpool ® can last from 2.5-4.5 hours, while wall ovens can take 4-6 hours. Safety tips for cleaning yourself: Always move pets, especially birds, to another enclosed and ventilated room or outside in the cage until the cleaning is complete. Turn on the hood fan and open the window to make sure your kitchen is well ventilated during its own cleaning cycle to help eliminate heat, smell and smoke. Never use a commercial oven cleaner or protective coating oven liner, as this can harm the interior of your oven. A special enamel coating makes it easy to remove ash at the end of the cycle with just a wet cloth. This can provide a useful alternative to manual cleaning.
